Microbial test kit for aviation fuel FUELSTAT® Resinae+ - box of 8 tests

FUELSTAT® is an immunoassay antibody fuel test kit for microbe detection. It can be used wherever Fuel is manufactured, stored, sold or used.

Unlike traditional tests, FUELSTAT® only finds micro-organisms that do damage to fuel.

With FUELSTAT®, tests take as little as 10 minutes, unlike current growth-based tests that need at least 72 hours. With easy-to-understand alert levels, you instantly know whether you need to take further action.

The process is self-contained, requiring no additional equipment—just a single FUELSTAT® fuel testing kit for each test. It's so easy to use, that a single individual can carry out the tests with

only minimal training.
