

Ø100 stainless steel venturi

Product codes:

Reference:
PC220-00007
EAN13: -
UPC: -

Product attributes:

Product description:

Titan Aviation venturis are designed to control fluid pressure in aviation fuelling systems. The purpose is to compensate the pressure loss between the venturi position and the underwing nozzle(s) and send the proper information to the control valve. The venturi is remotely sensing the pressure at the airplane wing and therefore enabling the control valve to operate accurately. This provides the fuelling equipment with safer and higher fuelling rates.
